*Prime Minister
of the Republic of Kazakhstan*

A. Mamin

Approved
by the resolution of the Government
of the Republic of Kazakhstan
dated November 26, 2020 No. 796

The procedure, types and amount of medical assistance to the population in emergency situations, the introduction of a state of emergency

Chapter 1. General provisions

1. The procedure, types and amount of medical assistance to the population in emergency situations, the introduction of a state of emergency (hereinafter referred to as the Procedure) have been developed in accordance with the Code of the Republic of Kazakhstan dated July 7, 2020 "On Public Health and Healthcare System", laws of the Republic of Kazakhstan dated February 8, 2003 "On State of Emergency" and dated April 11, 2014 "On Civil Protection".

2. This Procedure shall determine the procedure for provision, types and amount of medical assistance to the population in emergency situations, the introduction of a state of emergency.

3. In this Procedure, the following basic concepts are used:

1) disaster medicine - the field of medicine aimed at preventing and eliminating the medical and sanitary consequences of emergencies of a social, natural and man-made nature (hereinafter - emergencies), including the prevention and treatment of diseases of the population, sanitary-anti-epidemic and sanitary-preventive measures, preservation and restoration of health of participants in the liquidation of emergency situations, as well as medical assistance to employees of emergency services;

2) disaster medicine units – designed to work in emergency zones, in the territory where the state of emergency has been introduced, detachments, groups, brigades and other units created to provide emergency medical care and medical evacuation;

3) emergency medical assistance to the population in emergency situations - a form of providing a complex of therapeutic and prophylactic measures in combination with evacuation by appointment, carried out in emergency situations directly in the emergency zone and/or on its borders, in the territory where the state of emergency is introduced;

4) health and sanitary consequences of emergency situations – a set of factors and conditions that characterize the situation in emergency situations, the introduction of a state of emergency, and determine the content, volume and organization of medical assistance to the population. Its main elements are: the size and structure of sanitary losses of the population, the common factors of their formation; the need of the affected (patients) for medical care, the sanitary-hygienic and sanitary-epidemic state of the emergency zone (area), the territory where the state of emergency is introduced, the need for forces and means for health and sanitary provision and their availability; the state of medical forces and means; working conditions of medical and emergency rescue teams during emergency response, living conditions of the population and other;

5) type of medical assistance in emergency situations – a list of medical and preventive activities, determined by the place of their implementation, the qualifications of the persons providing medical assistance, and the availability of medical equipment;

6) volume of emergency medical assistance – a complete or reduced for life indications set of therapeutic and prophylactic measures carried out within the framework of the type of medical assistance, depending on the conditions of the situation in the emergency zone, in the territory where the state of emergency is introduced, and the possibilities of the medical evacuation stage.

Chapter 2.

Procedure for provision of medical assistance in emergency situations, the introduction of a state of emergency

4. The medical assistance to the population in emergency situations, the introduction of a state of emergency shall be provided depending on the classification of an emergency situation, as well as the nature and the scope of their health and sanitary consequences.
